PLANTS FOR BIRDS: GROWING HEALTHY COMMUNITIES FOR BIRDS AND PEOPLE

In 2009 John was hired by New York City Audubon to direct citizen science and outreach. Then in 2013 he was hired by National Audubon Society, first working on the Toyota Together Green Program. Guided by the principle that we can improve our communities by providing birds with food, shelter, safe passage and places to raise their young, John helped Audubon launch a nationwide program that provides resources and support to communities as they put native plants in the ground. Research is demonstrating that even small patches of habitat planted with natives can benefit birds – something we all can do. His focus will center on a better life for Central Valley birds.

BIRDS MATTER!

John Rowden, PhD. – National Audubon: Director of Community Conservation
NO SCHEDULED DATE FOR WORKPARTY THIS MONTH..STAY TUNED FOR THE NEXT

Climate Change Corner: Colorado State University
CSU is the country’s premier university for all things sustainable – and it’s got the numbers to prove it. The Sustainability Tracking, Assessment, and Ratings System (STARS) ranked CSU as the greenest campus in America. Which makes sense. Its location is ideal, nestled against the Rocky Mountain foothills on sunny, windy plains. And the commitment to sustainability is found everywhere across campus. It was first college to receive the coveted STARS platinum rating, and it was also the first to use solar energy to power an air conditioning and heat system. CSU is especially dedicated to sustainability in the classroom. More than 90 percent of CSU departments conduct sustainability-related research. NASA developed CloudStat technology to help CSU students conduct climate change research. It has pioneered a Master of Greenhouse Gas Management and Accounting program that is the first of its kind in the country. The list of academic commitments goes on...

Quick Announcements from Kern Audubon!
Kern Audubon Board of Directors meetings are open to any member. Meetings are held on the 3rd Tuesday of the month Aug-May, except Dec. Usually at 6:00 pm in the same location as for our monthly meetings, at Kern Co Sup of Schools at 17th + L Sts. (unless stated otherwise) Contact is Harry at 805-1420 harrylove1944@gmail.com

Kern Audubon’s website is looking for members’ bird photos. If you’ve taken bird photos in Kern County that might look good on our website, send them to Harry Love at harrylove1944@gmail.com. Be sure to include your name, the name of the bird, and where you took the photo.

Ready to recycle your National Audubon or other birding magazines? Kern Audubon wants your old copies of Audubon or Nature Conservancy for use at our Science Camps. You can drop them off at KAS’s monthly membership meeting. Thank you.

AUDUBON CHALLENGE #1
Did you know, according to Worldcentric.org, an estimated 40 billion plastic utensils are used every year in just the United States? Most of these are thrown out after just ONE use and end up in our landfills and waterways.
My sister and I carry a utensil in our purses that we use when we go out for frozen yogurt, rice bowls.....We challenge you to purchase a few (we also each have one in the car and in our day packs). They are very reasonably priced, come in different colors and are easily washed. We could save Audubon money by bringing our own spoon/fork to our Christmas dinner and Summer Picnic in the park. Plus we would be helping the environment ALL year long. Are you up for the challenge?

California Environmental Legislation
Ensuring that California will continue its leadership on climate change, the State Assembly two days ago passed Senate Bill 100, which sets an aggressive goal for 100% renewable energy by 2045. This is great news for the 170 California birds threatened by climate change, as well as the people of California, who will benefit from the cleaner air and clean energy. Another bill that passed was Senate Bill 834, which will ensure that pipelines and other infrastructure needed to support new oil development in federal waters cannot be built in California waters, effectively making new drilling impossible. This was a much-needed move to block the federal government, which is now pushing for new oil leases off our coast. But Californians have seen enough damage from oil spills. Both of these bills are now headed to the Governor’s desk because of broad coalition support. We’re proud that we were able to play a role in getting YES votes. Big thanks go out to the many thousands of Audubon activists who sent emails to their legislators, and those who actually visited district offices to speak out for these important measures. Birds have a voice in the legislature, and that voice is yours.
California: Bird By Design

California is famous for the spirit of its people, farms that feed millions, innovation that transforms the world, our magnificent coastlines, and Hollywood, to name a few. Audubon California would add our abundant bird life to that list. The more than 600 bird species that have been spotted in California make up about two-thirds of all birds species in North America, including the tiny Calliope Hummingbird, the elegant Black Phoebe, and the great California Condor. More commonly seen California birds total around 450 species, making our state one of the country’s most diverse. The natural habitats that draw millions of breeding, migrating, and resting birds to California—the shorelines, wetlands, oak woodlands, deserts, and forests—include 175 places most important to birds (Audubon calls them Important Bird Areas), the most of any state in the Lower 48.

Birds are crucial components of healthy natural systems, serving as pollinators, predators, scavengers, seed dispersers, and engineers in riparian, wetland, and coastal habitats. Birds are indicators of broader ecosystem function and environmental health because they respond rapidly to climatic and other changes, and are relatively easy to see and study. Birds and humans need the same things—clean air, water, and land—so the future health of birds and that of humans is inextricably linked.

California is a linchpin of the Pacific Flyway, the migratory route traveled by millions of birds every year. California wetlands, beaches, and other areas provide important habitat, stop over, feeding, and nesting sites for birds that travel from the Arctic to spots over 7,000 miles away in Chile, sustaining species that can be found throughout the Flyway.

MEMBERSHIP FORM

The basic membership dues cover the cost of your subscription to the Warbler. Please consider joining or renewing at a higher level to support the important environmental education and conservation projects critical to the protection of wildlife and the environment. All of your membership dues will be used to support our local education and conservation efforts.

*(Note: Membership in Kern Audubon Society does not make you a member of National Audubon. You must complete a separate membership form with National Audubon on its website. See link at bottom of this page.)*

Check all boxes that apply to your membership in KAS.

_____ I am a new member

_____ I am a renewing member

_____ Individual membership $20

_____ Student $15

_____ Family membership $35

_____ Benefactor Membership $100

_____ Condor life time membership $1,000

Donations:  _____ $5 supporter (recurring monthly) _____ $10 sustaining (recurring monthly)

One time:  _____ $30  _____ $50  ____ $100  ____ $250  ____ $500  ____ Other amount_____

Print this form. Make your check for membership in KAS and any additional donations payable to Kern Audubon Society. Mail check and this membership form to:

P.O. Box 3581, Bakersfield, CA 93385

If you wish to pay by credit card, you may use the Pay Pal button on our web site (keraudubonsociety.org)
